Alloy Theoretic Automated Toolkit

- [1] S. Samanta and A. van de Walle. Software tools for integrating special quasirandom structures and the cluster variation method into the calphad formalism. *J. of Phase Equilibria and Diffusion*, Sep, 2024. Download: [\[DOI\]](#) [\[Cite\]](#) .
- [2] H. Chen, S. Samanta, S. Zhu, H. Eckert, J. Schroers, S. Curtarolo, and A. van de Walle. Bayesian active machine learning for cluster expansion construction. *Computational Materials Science*, 231:112571, 2024. Download: [\[DOI\]](#) [\[Cite\]](#) .
- [3] A. van de Walle, H. Chen, H. Liu, C. Nataraj, S. Samanta, S. Zhu, and R. Arroyave. Interactive exploration of high-dimensional phase diagrams. *JOM - J. Min. Met. Mat. S.*, 74:3478, 2022. Download: [\[DOI\]](#) [\[Cite\]](#) Editor’s choice.
- [4] P. Dalach, D. E. Ellis, and A. van de Walle. Adaptive cluster expansions and redox-dependent atomic ordering. *Comp. Mater. Sci.*, 83:207, 2014. Download: [\[DOI\]](#) [\[Cite\]](#) .
- [5] A. van de Walle. Methods for first-principles alloy thermodynamics. *JOM - J. Min. Met. Mat. S.*, 65:1523–1532, 2013. Download: [\[DOI\]](#) [\[Cite\]](#) .
- [6] A. van de Walle, P. Tiwary, M. M. de Jong, D. L. Olmsted, M. D. Asta, A. Dick, D. Shin, Y. Wang, L.-Q. Chen, and Z.-K. Liu. Efficient stochastic generation of special quasirandom structures. *Calphad*, 42:13–18, 2013. Download: [\[DOI\]](#) [\[Cite\]](#) .
- [7] E. Cockayne and A. van de Walle. Building effective models from scarce but accurate data: Application to an alloy cluster expansion model. *Phys. Rev. B*, 81:012104, 2010. Download: [\[DOI\]](#) [\[Cite\]](#) [\[arXiv\]](#).
- [8] A. van de Walle. Multicomponent multisublattice alloys, nonconfigurational entropy and other additions to the Alloy Theoretic Automated Toolkit. *Calphad*, 33:266–278, 2009. Download: [\[DOI\]](#) [\[Cite\]](#) [\[arXiv\]](#).
- [9] A. van de Walle. A complete representation of structure-property relationships in crystals. *Nat. Mater.*, 7:455–458, 2008. Download: [\[DOI\]](#) [\[Cite\]](#) [\[Featured on cover\]](#) [\[See associated “News and Views” piece by Gus Hart\]](#).
- [10] A. van de Walle, M. D. Asta, and G. Ceder. The Alloy Theoretic Automated Toolkit: A user guide. *Calphad*, 26:539–553, 2002. Download: [\[DOI\]](#) [\[Cite\]](#) [\[arXiv\]](#).
- [11] A. van de Walle and G. Ceder. Automating first-principles phase diagram calculations. *J. Phase Equilib.*, 23:348–359, 2002. Download: [\[DOI\]](#) [\[Cite\]](#) [\[arXiv\]](#) [\[PDF 1173 KB\]](#) [\[PDF 2701 KB\]](#) [\[paper errata \(preprint ok\)\]](#).
- [12] A. van de Walle and M. D. Asta. Self-driven lattice-model monte carlo simulations of alloy thermodynamic properties and phase diagrams. *Model. Simul. Mater. Sc.*, 10:521, 2002. Download: [\[DOI\]](#) [\[Cite\]](#) [\[arXiv\]](#).

CALPHAD method

- [13] C. Kunselman, B. J. Bocklund, A. van de Walle, R. Otis, and R. Arroyave. Analytically differentiable metrics for phase stability. *Calphad*, 86:102705, 2024. Download: [DOI] [Cite] [SSRN].
- [14] S. Zhu and A. van de Walle. Computational assessment of novel predicted compounds in the Ni-Re alloy system. *J. of Phase Equilibria and Diffusion*, 42:315, 2021. Download: [DOI] [Cite] [NSF PAR].
- [15] S. Samanta and A. van de Walle. Rapid screening of high-throughput ground state predictions. *Calphad*, 74:102306, 2021. Download: [DOI] [Cite] .
- [16] A. van de Walle, J. Sabisch, A. M. Minor, and M. D. Asta. Identifying rhenium substitute candidate multi-principal-element alloys from electronic structure and thermodynamic criteria. *Journal of Materials Research*, 34:3296, 2019. Download: [DOI] [Cite] [Full text].
- [17] A. van de Walle and M. Asta. High-throughput calculations in the context of alloy design. *MRS Bull.*, 44:252, 2019. Download: [DOI] [Cite] .
- [18] A. van de Walle and Q.-J. Hong. Assessing phase diagram accuracy. *J. Phase Equilib. Diff.*, 40:170, 2019. Download: [DOI] [Cite] .
- [19] A. van de Walle, C. Nataraj, and Z.-K. Liu. The thermodynamic database database. *Calphad*, 61:173, 2018. Download: [DOI] [Cite] .
- [20] A. van de Walle, R. Sun, Q.-J. Hong, and S. Kadkhodaei. Software tools for high-throughput calphad from first-principles data. *Calphad*, 58:70, 2017. Download: [DOI] [Cite] .
- [21] G. Ghosh, A. van de Walle, M. D. Asta, and G.B. Olson. Phase stability of the Hf-Nb system: From first-principles to CALPHAD. *Calphad*, 26:491, 2002. Download: [DOI] [Cite] .

Liquids

- [22] Q.-J. Hong, S. V. Ushakov, A. van de Walle, and A. Navrotsky. Melting temperature prediction using a graph neural network model: from ancient minerals to new materials. *Proceedings of the National Academy of Science*, 119:e2209630119, 2022. Download: [DOI] [Cite] .
- [23] Q. Hong, J. Schroer, D. Hofmann, S. Curtarolo, M. Asta, and A. van de Walle. Theoretical prediction of melting temperature for a Mo-Ru-Ta-W HCP multi-principal element alloy. *NPJ Computational Materials*, 7:1, 2021. Download: [DOI] [Cite] [NSF PAR].
- [24] Q.-J. Hong and A. van de Walle. Re-entrant melting of sodium, magnesium and aluminum: General trend. *Phys. Rev. B Rapid Communications*, 100:140102(R), 2019. Download: [DOI] [Cite] [arXiv] [NSF PAR].
- [25] Q.-J. Hong and A. van de Walle. A user guide for SLUSCHI (solid and liquid in ultra small coexistence with hovering interfaces). *Calphad*, 52:88, 2016. Download: [DOI] [Cite] .
- [26] Q.-J. Hong and A. van de Walle. Solid-liquid coexistence in small systems: A statistical method to calculate melting temperatures. *J. Chem. Phys.*, 139:094114, 2013. Download: [DOI] [Cite] .
- [27] Q.-J. Hong and A. van de Walle. Direct first-principles chemical potential calculations of liquids. *J. Chem. Phys.*, 137:094114, 2012. Download: [DOI] [Cite] .
- [28] L. G. Wang and A. van de Walle. Ab initio calculations of the melting temperatures of refractory bcc metals. *Phys. Chem. Chem. Phys.*, 14:1529, 2012. Download: [DOI] [Cite] .
- [29] L. G. Wang, A. van de Walle, and D. Alfè. Melting temperature of tungsten from two ab initio approaches. *Phys. Rev. B*, 84:092102, 2011. Download: [DOI] [Cite] .

Accelerated Molecular Dynamics

- [30] S. Kadhodaei and A. van de Walle. A simple local expression for the prefactor in transition state theory. *J. Chem. Phys.*, 150:144105, 2019. Download: [arXiv] [DOI] [Cite] .
- [31] P. Tiwary and A. van de Walle. A review of enhanced sampling approaches for accelerated molecular dynamics. In G. Tucker and C. Weinberger, editors, *Multiscale materials modeling for nanomechanics*. Springer, 2016. Download: [DOI] [Cite] .
- [32] A. van de Walle. Simulations provide a rare look at real melting (in “perspectives”). *Science*, 346:704, 2014. Download: [DOI] [Cite] [Full text].
- [33] P. Tiwary and A. van de Walle. Accelerated molecular dynamics simulations through stochastic iterations and collective variable based basin identification. *Phys. Rev. B*, 87:094304, 2013. Download: [DOI] [Cite] [arXiv].
- [34] P. Tiwary and A. van de Walle. Hybrid deterministic and stochastic approach for efficient long time scale atomistic simulations. *Phys. Rev. B*, 84:100301(R), 2011. Download: [DOI] [Cite] [arXiv].

Mechanical Instabilities

- [35] H. Chen, Q. Hong, A. Navrotsky, and A. van de Walle. A computational free energy reference for mechanically unstable phases. *Calphad*, submitted, 2025. Download: [SSRN].
- [36] A. van de Walle, S. Samanta, C. Nataraj, S. Zhu, H. Chen, H. Liu, and R. Arroyave. Revisiting the SGTE lattice stability of bcc aluminum. *Calphad*, 83:102628, 2023. Download: [SSRN] [DOI] [Cite] .
- [37] S. Kadhodaei and A. van de Walle. Software tools for thermodynamic calculation of mechanically unstable phases from first-principles data. *Comput. Phys. Commun.*, 246:106712, 2019. Download: [DOI] [Cite] [NSF PAR].
- [38] A. van de Walle. Reconciling SGTE and ab initio enthalpies of the elements. *Calphad*, 60:1, 2018. Download: [DOI] [Cite] .
- [39] S. Kadhodaei and A. van de Walle. Free energy calculations of the mechanically unstable phases of PtTi and NiTi. *Acta Mater.*, 147:296, 2018. Download: [DOI] [Cite] .
- [40] A. van de Walle, S. Kadhodaei, R. Sun, and Q.-J. Hong. Epicycle method for elasticity limit calculations. *Phys. Rev. B*, 95:144113, 2017. Download: [DOI] [Cite] [arXiv].
- [41] S. Kadhodaei, Q.-J. Hong, and A. van de Walle. Free energy calculation of mechanically unstable but dynamically stabilized bcc titanium. *Phys. Rev. B*, 95:064101, 2017. Download: [DOI] [Cite] [arXiv] [Featured in Kaleidoscope].
- [42] A. van de Walle, Q.-J. Hong, S. Kadhodaei, and R. Sun. The free energy of mechanically unstable phases. *Nature Commun.*, 6:7559, 2015. Download: [DOI] [Cite] .
- [43] J. Z. Liu, A. van de Walle, G. Ghosh, and M. D. Asta. Structure, energetics, and mechanical stability of Fe-Cu bcc alloys from first-principles calculations. *Phys. Rev. B*, 72:144109, 2005. Download: [DOI] [Cite] .
- [44] A. van de Walle, C. Tricot, and M. Gerspacher. Modeling carbon black reinforcement in rubber compound. *Kautschuk Gummi Kunststoffe*, 49:172, 1996. Download: [gzipped PS] [PDF].

High-Temperature Materials

- [45] S. V. Ushakov, Q.-J. Hong, A. Pavlik III, A. van de Walle, and A. Navrotsky. Thermal expansion and enthalpies of phase transformation and fusion of Er_2O_3 and Tm_2O_3 from experiment and computation. *Chem. Mater.*, 36:4868, 2024. Download: [DOI] [Cite] .
- [46] Q.-J. Hong, P. D. Tepesch, and A. van de Walle. Combined experimental and computational assessment of the Li_2O - La_2O_3 - ZrO_2 phase diagram. *Journal of the American Ceramic Society*, 107:5682, 2024. Download: [DOI] [Cite] .
- [47] B. L. Brugman, Y. Han, L. J. Leinbach, K. Leinenweber, A. van de Walle, S. V. Ushakov, Q.-J. Hong, and A. Navrotsky. Computationally led high pressure synthesis and experimental thermodynamics of rock salt yttrium monoxide. *Chemistry of Materials*, 36:332, 2024. Download: [DOI] [Cite] .
- [48] S. V. Ushakov, Q.-J. Hong, D. A. Gilbert, A. Navrotsky, and A. van de Walle. Thorium and rare earth monoxides and related phases. *Materials*, 16:1350, 2023. Download: [DOI] [Cite] .
- [49] Q. Hong, A. van de Walle, S. V. Ushakov, and A. Navrotsky. Integrating computational and experimental thermodynamics of refractory materials at high temperature. *Calphad*, 79:102500, 2022. Download: [DOI] [Cite] .
- [50] H. Liu, M. Asta, and A. van de Walle. Computational assessment of the efficacy of oxidation-resistant iridium coatings for multiple principal component rhenium substitutes. *Scripta Mater.*, 189:16, 2020. Download: [DOI] [Cite] .
- [51] S. V. Ushakov, A. Navrotsky, Q.-J. Hong, and A. van de Walle. Carbides and nitrides of zirconium and hafnium. *Materials*, 12:2728, 2019. Download: [DOI] [Cite] [NSF PAR].
- [52] R. Sun, M. Asta, and A. van de Walle. First-principles thermal compatibility between Ru-based Re-substitute alloys and Ir coatings. *Comp. Mater. Sci.*, 170:109199, 2019. Download: [DOI] [Cite] .
- [53] Q.-J. Hong, S. V. Ushakov, D. Kapush, C. J. Benmore, R. J. K. Weber, A. van de Walle, and A. Navrotsky. Combined computational and experimental investigation of high temperature thermodynamics and structure of cubic ZrO_2 and HfO_2 . *Sci. Rep.*, 8:14962, 2018. Download: [DOI] [Cite] .
- [54] M. Fyhrie, Q. Hong, D. Kapush, S.V. Ushakov, H. Liu, A. van de Walle, and A. Navrotsky. Energetics of melting of Yb_2O_3 and Lu_2O_3 from drop and catch calorimetry and first principles computations. *The Journal of Chemical Thermodynamics*, 132:405, 2019. Download: [DOI] [Cite] [NSF PAR].
- [55] D. Kapush, S. V. Ushakov, A. Navrotsky, Q.-J. Hong, H. Liu, and A. van de Walle. A combined experimental and theoretical study of enthalpy of phase transition and fusion of yttria above 2000 °C using ‘drop-n-catch’ calorimetry and first-principles calculations. *Acta Mater.*, 124:204, 2017. Download: [DOI] [Cite] .
- [56] R. Chinnappan, B. K. Panigrahi, and A. van de Walle. First-principles study of phase equilibrium in Ti-V, Ti-Nb, and Ti-Ta alloys. *Calphad*, 54:125, 2016. Download: [DOI] [Cite] .
